Pola e Massa was established in the 1978 and it is located in the Piedmont region, one of the more industrialized area in the North West of Italy.

SUPPORT,
ADVICE
AND IMPROVEMENTS

With these premises since 1978 Pola e Massa has been sustaining its customers both in their growing processes and in new initiatives, working in wet processes of the surface treatment of small and medium boards/parts and in automation system.

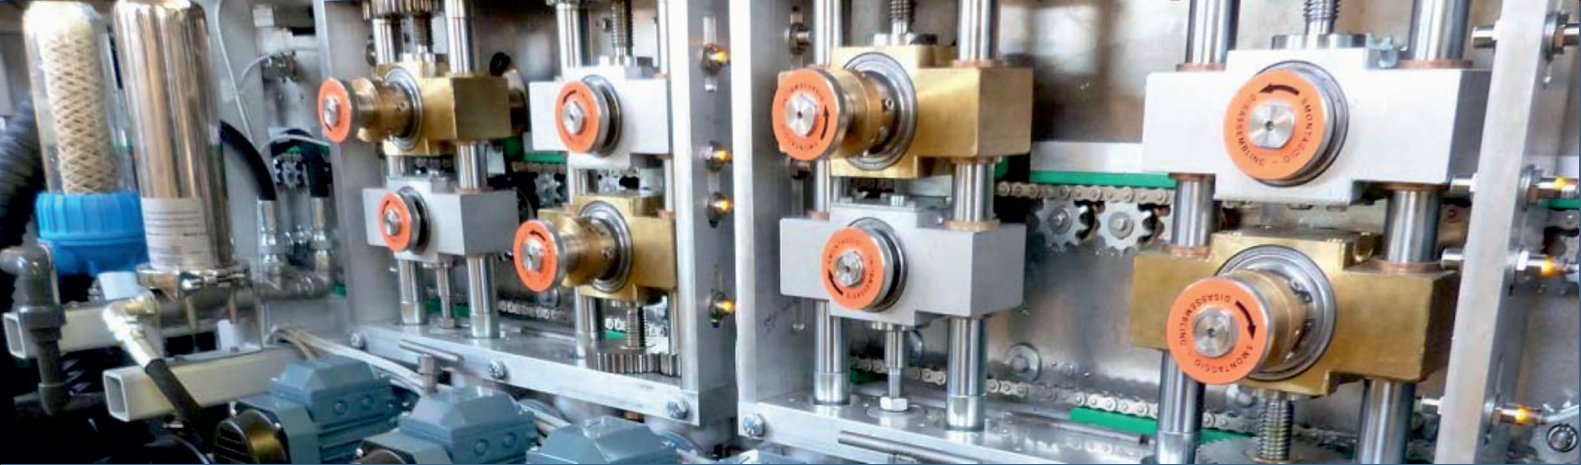

All products are specifically designed for applications where accuracy of work is a critical matter.

This approach reflects company philosophy: offer to the market "state-of-the-art" technology, best ratio price/quality, continuous support and a concrete guarantee that all products are designed, developed, implemented

and manufactured for long life, spending relevant efforts also to protect the environment.

Company's customer base is actually made up of the more prestigious members both of the industries and services around the world.

At every customer Pola e Massa wants to guarantee a service of quality, efficiency and best skills available in the market. These reasons has allowed Pola e Massa to become a point of reference in term of analysis and evaluations of issues concerning wet surface treatment and automation, complex solutions and innovative systems.

COMPANY

FOCUS

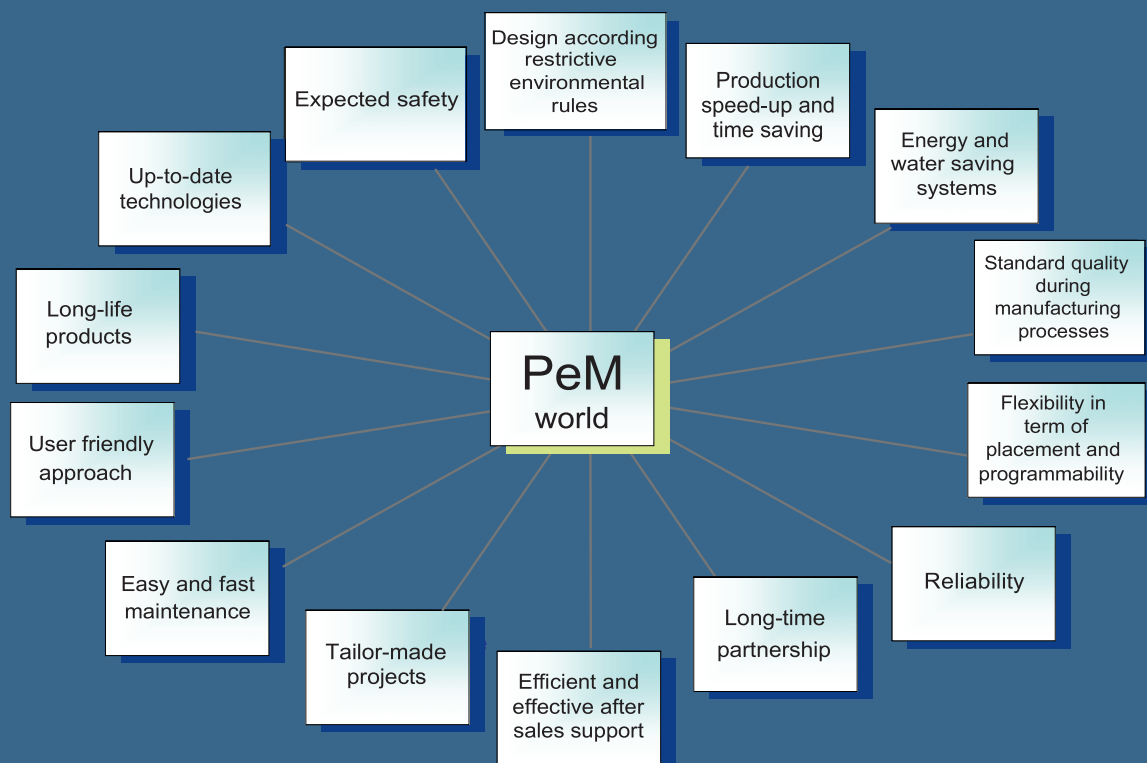

Pola e Massa designs and manufactures equipment for wet surface treatment in the following main processes:

- Deburring
- Scrubbing
- Washing
- Satin
- Cleaning
- Surface roughness process
- Thickness reduction
- Decorative pattern on even surface

and it completes its own offer by additional services as:

- Training services
- Installation and maintenance
- Technical advisory
- Product trials

The company invests every year significant resources in R & D, creating real added value solutions for its customers, in order to consistently ensure the Pola e Massa world:

Since 1978 design and manufacture equipment for wet processes of the surface treatment and automation

VALUES AND FUTURE

During last recent years the society has seen an encouraging development of techniques and products that have profoundly modified our world. People's requests have been focusing towards products able to ensure better quality of life.

Pola e Massa is currently spending many efforts in this direction.

We are thinking how people in the coming years will increase product requests in an affluent society.

Products more and more advanced, user friendly and reliable will be part of our life, more than in the past.

More specialized products, because we believe that is crucial to identify dedicated solutions for specific submitted requests.

As consequence, Pola e Massa will increase its own partnerships to find out and implement innovative solutions about equipment, services and materials.

It will implement its efforts in offering the safest and more efficient and effectiveness proposals.

It will support customers to allow them to drive technology development and guarantee a better world.

It will always keep doors open for whoever wants to confront in order to deeply study some topics to company's related business.

***"To know that every day our equipment is used to improve life of many people.
This is our ambition.
This is our gratification."***

***Sebastiano Vacca
President***
